APPLIED MATHEMATICS AND COMPUTATION

VOLUME 24 1987

G. ADOMIAN
An Investigation of the Asymptomatic Decomposition Method for Nonlinear Equations in Physics 1

ANTHONY S. WEXLER
Automatic Evaluation of Derivatives 19

RICHARD L. PATTERSON
Regression Estimates of Inputs to an $M(t)/G/\infty$ Service System 47

HANS F. RAVN
A Forward Maximum Principle Algorithm with Decision Horizon Results 65

I. M. LONGMAN
Increasing the Convergence Rate of Series 77

KHADER H. AHMAD
Stability Relative to a Set and to the Whole Space Revisited 91

ALEXANDER MORGAN AND ANDREW SOMMESE
A Homotopy for Solving General Polynomial Systems that Respects m-Homogeneous Structures 101

ALEXANDER MORGAN AND ANDREW SOMMESE
Computing All Solutions to Polynomial Systems Using Homotopy Continuation 115

I. M. LONGMAN
Complementary Moments and the Summation of Series 139

ZI-PING LUO AND HERSCHEL RABITZ
Expected Value Analysis of Multiparameter Systems 153

A. R. Aftabizadeh and Joseph Wiener
Differential Inequalities for Delay Differential Equations with Piecewise Constant Argument 183

Moshe Dror and Saul I. Gass
Interactive Scheme for a MOLP Problem Given Two Partial Orders: One on Variables and One on Objectives 195

Dale A. Anderson
Equidistribution Schemes, Poisson Generators, and Adaptive Grids 211

Donald Greenspan
Semiclassical Modeling of the States and Spectra of Para Helium Singlets with an Algebraic Formula for Excited States 229

William J. Reed
Optimal Preventive Maintenance, Protection, and Replacement of a Revenue-Earning Asset 241

Sadashiv G. Deo and Euclides F. Torres
Generalized Variation-of-Constants Formula for Nonlinear Functional Differential Equations 263

Haym Benaroya
Nonrecursive Statistics for Integral Equation Solutions 275

Ferenc Szidarovsky, Mark Gershon, and Andras Bardossy
Application of Multiobjective Dynamic Programming to Regional Natural Resource Management 281

David Weinberg and Clyde Martin
A Note on Resultants 303

G. Adomian
Wave Propagation in Nonlinear Media 311

Layne T. Watson and Melvin R. Scott
Solving Spline-Collocation Approximations to Nonlinear Two-Point Boundary-Value Problems by a Homotopy Method 333
